WEBSITE ISSUES FROM TERRY

PAGES THAT GIVE A 404 ERROR:

https://bapi-headless.vercel.app/en/products/temperature-sensors/temp-room-temp

PAGES WITH MISSING CONFIGURATOR:

https://bapi-headless.vercel.app/en/product/duct-averaging-temperature-transmitter-flexible-2

https://bapi-headless.vercel.app/en/product/duct-averaging-temperature-sensor-flexible-2

OTHER ISSUES/QUESTIONS

Why do some configurations options have radio buttons and others have dropdowns? On some products, there are radio buttons and dropdowns in the same configure area. It appears that 3 or less options get a Radio Button and anything more than 3 gets a dropdown. The product link below actually has a dropdown, a radio button and a slider all in one configurator.
https://bapi-headless.vercel.app/en/product/zpm-standard-accuracy-%c2%b11-pressure-sensor-in-a-bapi-box-ip66-or-nema-4-rated-field-selected-range-and-output

The bulleted text from the current site is not bulleted on the new site. It doesn't look right without the bullet.

The "Instruction Sheet" category on this page has an extra document that takes you to the page you're on. Also the configuration portion isn't working.
https://bapi-headless.vercel.app/en/product/duct-averaging-temperature-sensor-flexible-2

The videos that are on the product pages of the current site did not come over to the video tab of the new site. The videos on the current site are located in the "Description" part of the product page.

The order of the temperature sensors in the configurator dropdown is not the same across the products and do not match the order on the current website. (Not sure how much this matters.)

One of the categories under the "Products" dropdown is "Immersion and Well". Make that "Immersion and Thermowell" as BAPI does not use the word "Well" for "Thermowell" (although some companies and people do)

4 to 20mA Output option missing from this product.
https://bapi-headless.vercel.app/en/product/duct-temperature-transmitter-2

The Wireless units are included in the Temperature Sensors Categories (Wireless Duct in Temperature Duct, etc) I believe we are keeping the Wireless Products in the Wireless Category only.

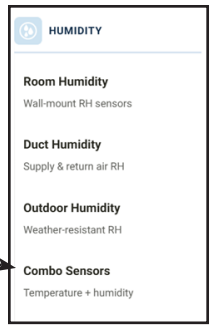
"Real World Examples" in WAM section needs a lot of work. The examples are duplicated many times and mislabeled. This requires a group discussion to determine what examples should be there.

Delta Style temperature/humidity sensors are listed in the Outside Air temperature section. The Delta's should only be in the Room and Wall Category.

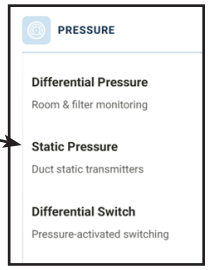
There is no image for this product.
https://bapi-headless.vercel.app/en/product/bapi-stat-quantum-temperature-and-humidity-sensor-with-display

I don't know what this product is or why it's on the website.
https://bapi-headless.vercel.app/en/product/delta-style-room-humidity-sensor-17m50

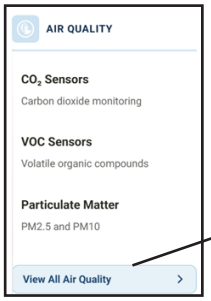
We do not need the "Combo Sensors" in the Humidity Category because all the humidity products are available as humidity alone or temperature/humidity combination from the one product page. They are not segregated into humidity only or temp/humidity combo.



The “Static Pressure” Category under “Pressure” should be re-labeled as “Pickup Ports and Probes”

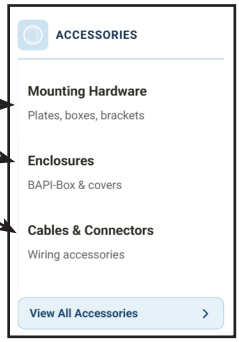


The “Air Quality” category only lists 3 subcategories but there are actually six subcategories for “Air Quality” on the current site and also in the Air Quality section of the new site. If you click on the “View All” link, then you see the six subcategories that should be listed.

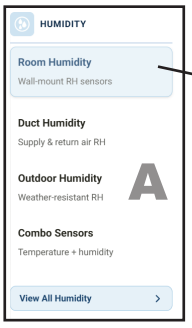


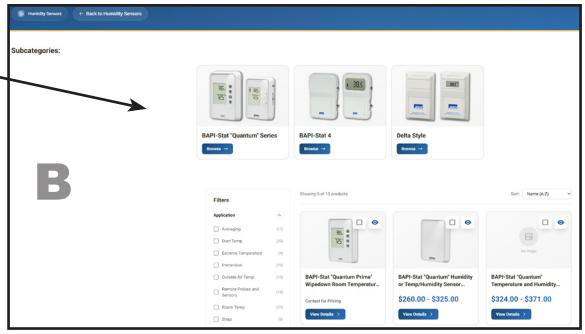
Additional Issues after the first post to Asana are listed below.

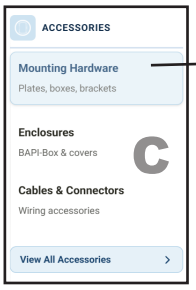
The three subcategories are wrong in the “Accessories” category and the pages that they take you to do not function correctly. Our “Accessories” line covers some many unrelated things that it would be hard to make subcategories.

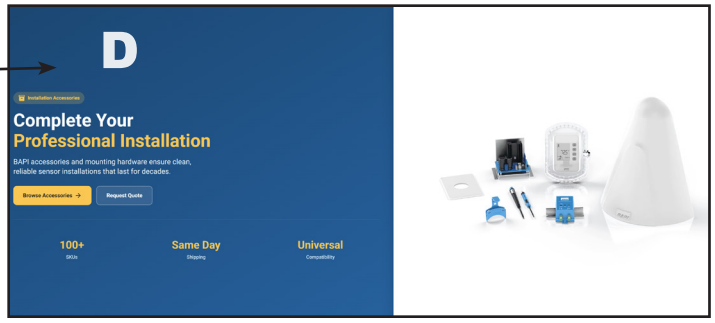


I don’t know why the Temperature, Humidity, Pressure, Air Quality and Wireless subcategory links take you to pages with products on them (A & B) while Accessories, Blu-Test and WAM take you to big overview type pages (C & D).

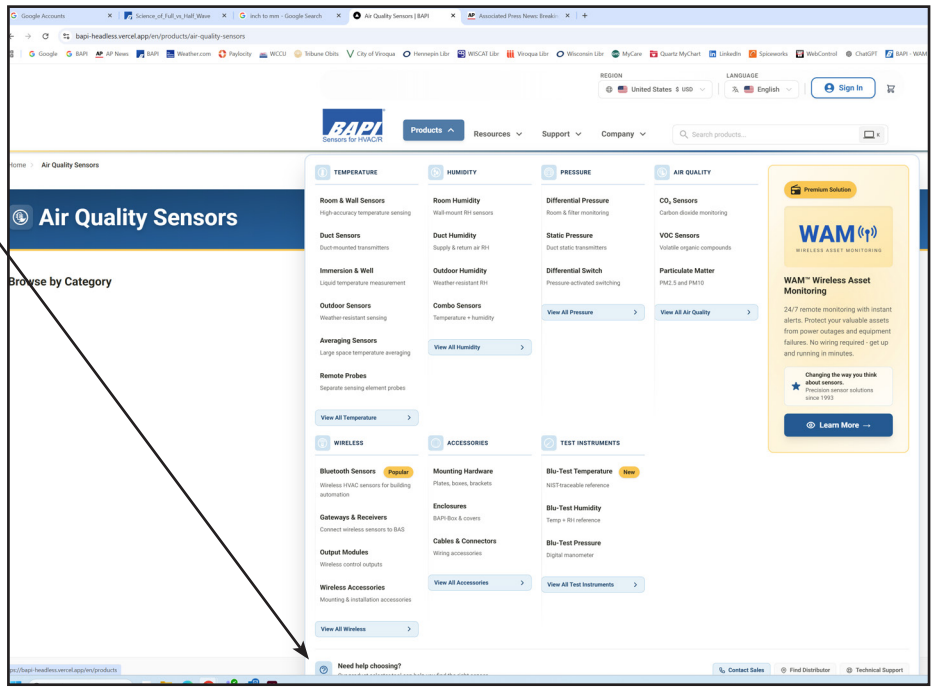




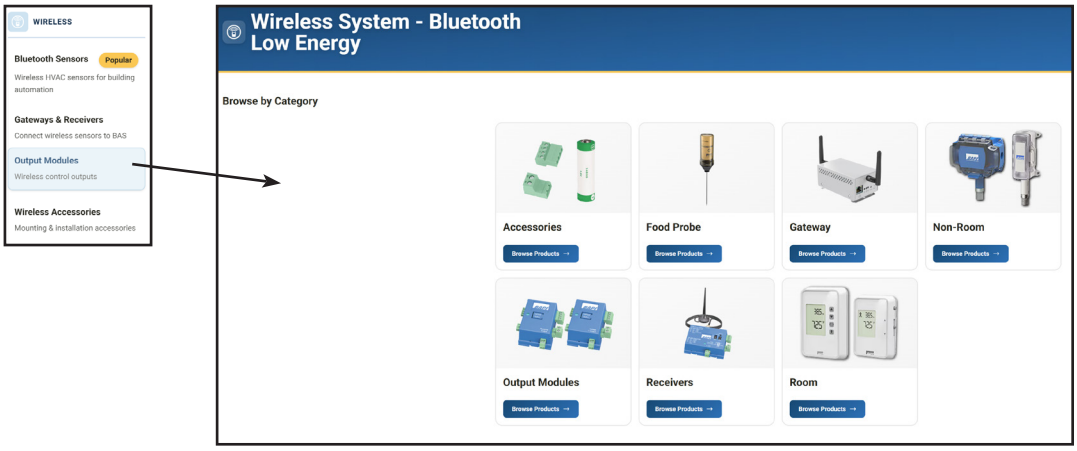




The “Products” dropdown screen appears to be cut off at the bottom and there’s no way to get to the lower part.

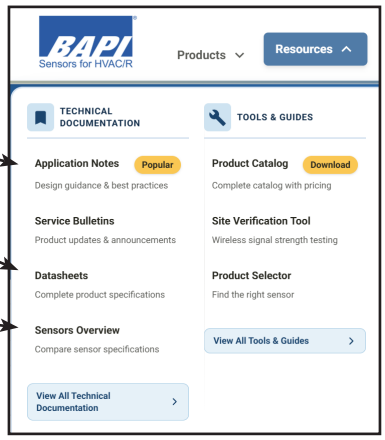


All the subcategories in the Wireless category open a page with all the wireless subcategories instead of a page for that specific subcategory.



RESOURCES SECTION

The Application Notes need to be grouped into categories like they are on the current website. The new site has all 60 on one page with no grouping so it’s impossible to find what you’re looking for.

I’d remove datasheets and make them go to the product page for the datasheets. There are hundreds of datasheets so it’s impossible to find the one you’re looking for in a page with all of them.


The “Sensors Overview” needs to be like the “BAPI Sensors Overview” (https://www.bapihvac.com/sensor-specs/) on the current site with much more indepth specifications for all the sensors elements. The new site has only a line or two for each element which isn’t nearly enough.
